

A Wahid Safhadi

Senior IT Developer | Backend & Fullstack Engineer

awahid.safhadi@gmail.com | +62 877-8008-1871 | Cikarang, Bekasi, Indonesia | awahids.my.id

PROFILE

Senior IT Developer with more than 4 years of experience designing and building web-based systems across fintech, e-commerce, and logistics industries. Skilled in backend and full-stack development using NestJS, Node.js, TypeScript, Laravel/PHP, and Vue.js/Next.js, with strong command of RDBMS and NoSQL databases (PostgreSQL, MySQL, MongoDB, Oracle). Experienced in designing scalable REST APIs, optimizing database performance, and delivering end-to-end features from architecture to deployment. Comfortable working independently or within cross-functional teams, with a strong foundation in OOP, clean code principles, and a track record of adopting new technologies quickly.

KEY QUALIFICATIONS

- Bachelor's degree in Informatics Engineering (University of Mataram) with 4+ years of professional experience across fintech, e-commerce, and logistics/warehouse industries.
- Strong command of RDBMS and NoSQL databases: PostgreSQL, MySQL, Oracle Apex, and MongoDB.
- Proficient in backend and full-stack frameworks: NestJS, ExpressJS, Laravel, Next.js, Vue.js, and Golang (Gin/Fiber).
- Experienced in designing and optimizing REST APIs, SQL queries, and database schemas for scalability and performance.
- Hands-on experience with cloud infrastructure and deployment (AWS S3, Alibaba Cloud, Vercel, Docker) and version control (Git).
- Comfortable adapting to new languages, frameworks, and tools as project needs evolve.

WORK EXPERIENCE

Senior IT Developer

Feb 2025 – Present

Rasa Group | Cikarang, Bekasi

- Single-handedly built a full-stack internal platform from requirements to production in 4–5 months using NestJS, Prisma ORM, Vue.js, and PostgreSQL, digitizing RMPM (raw material) requests from production to warehouse, including transfer documentation, per-item batching, and handover (serah terima) workflows.
- Built and deployed a full-stack Warehouse Management System managing ~1,000 SKUs and tens of thousands of batches, cutting the batching process time from over an hour to about 5 minutes.
- Integrated the WMS with QAD ERP and Jubelio, automating stock deduction on every transaction and syncing marketplace stock directly into the ERP — eliminating manual stock adjustments.
- Built and deployed a GPS-based Employee Attendance System with face-detection photo verification, now used daily by around 300 employees — reducing buddy-punching (titip absen) and improving HR's efficiency in attendance data recap.
- Currently developing a Logistics Tracker to monitor driver location in real time and estimate fuel usage based on start-to-end odometer (km) input.
- Addressed maintainability risk in the growing codebase by designing a modular backend architecture around clean code principles, reducing long-term maintenance effort.

Backend Developer

Aug 2022 – Feb 2025

PT. Ethis Fintech Indonesia | West Jakarta

- Faced with slow, hard-to-scale legacy APIs, designed and deployed RESTful APIs using NestJS, MySQL, and TypeORM, improving platform performance by 30%.
- To reduce friction between frontend and backend teams, led API integration efforts, cutting frontend development time by 20%.
- Addressed recurring service instability by implementing robust error-handling mechanisms, achieving 95% uptime for critical services.
- Modernized outdated infrastructure by building and maintaining secure, efficient server deployments on Alibaba Cloud.
- Tackled slow API response times through code refactoring and database optimization, increasing efficiency by 40%.
- Delivered three major project modules ahead of schedule, improving overall project timelines by 15%.

Fullstack Engineer

Jul 2024 – Sep 2024

Tokokupon.com | Tangerang, Banten (Remote)

- Needed to launch a new top-up platform quickly, developed a responsive web application using Next.js (frontend) and NestJS + MySQL (backend).
- To boost recurring revenue, implemented a dynamic subscription and user management system, increasing platform revenue by 25%.
- Addressed slow global load times by deploying on Vercel with CDN integration, ensuring fast, highly available access worldwide.
- Reduced page load times by 50% through efficient server-side rendering and caching strategies.
- Improved database query performance by 30% via optimized indexing and schema design, speeding up transaction processing.

Backend Developer

Jan 2022 – Aug 2022

Adala.id | South Tangerang, Banten (Remote)

- Tasked with digitizing warehouse operations, designed scalable inventory and warehouse management APIs using NestJS, MySQL, and ExpressJS.
- Resolved unreliable media handling by deploying and managing AWS S3 storage, ensuring secure, efficient file handling.
- Reduced API latency by optimizing database queries and service architecture, improving response time by 35%.
- Increased file upload and retrieval efficiency by 30% through optimized AWS S3 configuration and integration.

PROJECTS

GPS-Based Employee Attendance System — Rasa Group — built in 7 days with AI (Claude) assistance

Golang (Gin/Fiber), Vue.js, JWT

Employee attendance system with GPS location validation (Haversine distance) and face-detection photo verification, role-based access, and an admin panel for employee data management. Live in production, used daily by ~300 employees, and has reduced buddy-punching (titip absen) while improving HR's attendance recap efficiency.

Warehouse Management System (WMS) — Rasa Group — built solo, ~4–5 months requirement to production

Vue.js, NestJS, PostgreSQL

Full-stack warehouse and inventory management system managing ~1,000 SKUs and tens of thousands of batches, covering RMPM requests from production to warehouse (with transfer documents), per-item batching, and handover (serah terima). Cut batching time from over an hour to ~5 minutes, and integrates with QAD ERP and Jubelio to automate stock deduction and sync marketplace stock directly into the ERP.

Logistics Tracker — Rasa Group — in progress

Flutter, Vue.js (frontend)

A logistics tracking system to monitor driver location in real time and estimate fuel usage based on start-to-end odometer (km) input.

Qala Temu — qala.digital

React/Next.js, Node.js, PostgreSQL

An appointment and booking platform for service businesses, featuring a booking UI, admin operations panel, and API-driven scheduling.

Adawms — Adala.id

NestJS, MySQL, AWS S3, ExpressJS, NodeMailer, JWT, OAuth

A platform built to manage warehouse inventory across several owned online shop platforms, keeping stock data consistent between warehouses and e-commerce channels.

Landing Page Ethis — PT. Ethis Fintech Indonesia

Laravel, MySQL, Alibaba Cloud, Eloquent, JWT

Company website for Ethis Fintech Indonesia, a P2P lending platform.

Admin Page Ethis — PT. Ethis Fintech Indonesia

Laravel, MySQL, Alibaba Cloud, Eloquent, JWT

Content Management System (CMS) for several websites owned by Ethis, including landing pages, mobile applications, and borrower/beneficiary websites.

Dashboard Funder Ethis — *PT. Ethis Fintech Indonesia*

Laravel, MySQL, Alibaba Cloud, Eloquent, JWT

Dashboard for funders who register on the Ethis platform.

Dashboard Beneficiary Ethis — *PT. Ethis Fintech Indonesia*

Laravel, MySQL, Alibaba Cloud, Eloquent, JWT

Dashboard for fund recipients who register on the Ethis platform.

Career Page Ethis — *PT. Ethis Fintech Indonesia*

NestJS, MySQL, Alibaba Cloud, TypeORM

A page to display job vacancies at Ethis.

Ethis Mobile — *PT. Ethis Fintech Indonesia*

Laravel, MySQL, Alibaba Cloud, Eloquent, JWT

Mobile application for Ethis Fintech Indonesia.

Landing Page Tokokupon.com — *Tokokupon.com*

Next.js, NestJS, Ant Design, MySQL

Landing page for the Tokokupon.com game top-up platform.

CMS Tokokupon.com — *Tokokupon.com*

Next.js, NestJS, Ant Design, MySQL

Content Management System for managing Tokokupon.com's platform content.

Arafah Group — *Freelance*

Next.js, JavaScript, HTML, CSS, Vercel

Website for a driving course service located in Bandung and surrounding areas.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, PHP, Go, HTML, CSS

Frameworks & Libraries: NestJS, ExpressJS, Vue.js, Next.js, Laravel, Gin Gonic, TypeORM, Prisma, GORM, Sequelize

Databases (RDBMS): PostgreSQL, MySQL, Oracle Apex, MongoDB

Others: Git, Jira, Scrum, REST API, GraphQL, Postman, JWT/OAuth, Docker, AWS S3, Alibaba Cloud

AI-Assisted Development Tools: Claude AI, Codex, Komodo

EDUCATION

Bachelor's Degree in Informatics Engineering

University of Mataram — Mataram, West Nusa Tenggara | Aug 2014 – Feb 2022

CERTIFICATIONS

- Backend Developer — Glints x Binar (2021): Building APIs with Node.js & ExpressJS.
- Design & Programming Database with SQL — Oracle Academy (2021).
- Database Design — Oracle Academy (2021).
